Ship::setAmmountOfLives

```
graph LR; A["EditComTableWindow::on_lifeLineEdit_editingFinished"] --> C["Ship::setAmmountOfLives"]; B["EditComTableWindow::on_lifeLineEdit_returnPressed"] --> C;
```

The diagram illustrates two separate calls to the `Ship::setAmmountOfLives` method. On the left, two white rectangular boxes represent the source methods: `EditComTableWindow::on_lifeLineEdit_editingFinished` (top) and `EditComTableWindow::on_lifeLineEdit_returnPressed` (bottom). Blue arrows point from each of these boxes to a single gray rectangular box on the right, which represents the target method `Ship::setAmmountOfLives`.
